TREE TRAVERSAL

How to visit (enumerate, iterate through, traverse...) all the nodes of a tree ?

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

TREE TRAVERSAL – DEPTH FIRST “PREORDER”

```
depthFirst (root) {  
  if (root is not em  
    visit root  
  for each child of root  
    depthfirst( child )  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

TREE TRAVERSAL – DEPTH FIRST “PREORDER”

```
depthFirst (root) {  
  if (root is not em  
    visit root  
  for each child of root  
    depthfirst( child )  
}
```

“preorder” traversal: visit the root before the children

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

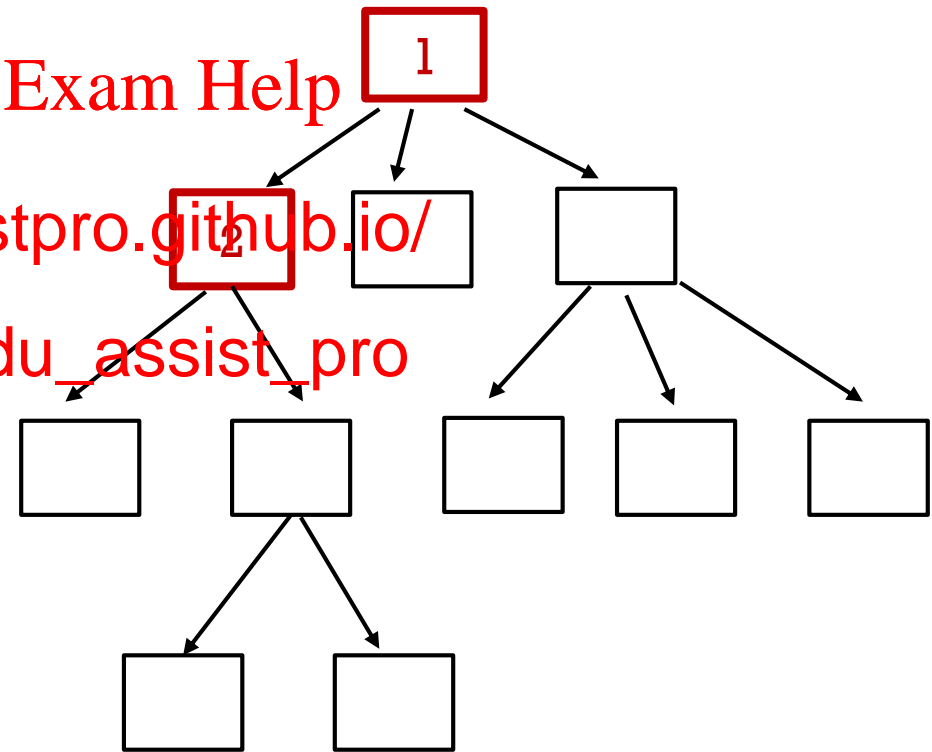

TREE TRAVERSAL – DEPTH FIRST “PREORDER”

```
depthFirst (root) {  
  if (root is not em  
    visit root  
  for each child of root  
    depthfirst( child )  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

Note that here we are assuming that we iterate through the children nodes from left to right.

TREE TRAVERSAL – DEPTH FIRST “PREORDER”

```
depthFirst (root) {  
  if (root is not em  
    visit root  
  for each child of root  
    depthfirst( child )  
}
```

Assignment Project Exam Help

“VISIT” A NODE

“Visit” implies that you do something at that node.

<https://eduassistpro.github.io/>

Analogy: you aren't visiting UK if you just fly through Heathrow.

TREE TRAVERSAL – DEPTH FIRST “POSTORDER”

Q: Which node is visited first?

```
depthFirst (root) {  
  if (root is not em  
  for each child o  
    depthfirst( child )  
  visit root  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

“postorder” traversal: visit
the root after the children

TREE TRAVERSAL – DEPTH FIRST “POSTORDER”

```
depthFirst (root) {  
  if (root is not em  
  for each child o  
    depthfirst( child )  
  visit root  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

TREE TRAVERSAL – DEPTH FIRST “POSTORDER”

```
depthFirst (root) {  
  if (root is not em  
  for each child o  
    depthfirst( child )  
  visit root  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

TREE TRAVERSAL – DEPTH FIRST “POSTORDER”

```
depthFirst (root) {  
  if (root is not em  
  for each child o  
    depthfirst( child )  
  visit root  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

TREE TRAVERSAL – DEPTH FIRST “POSTORDER”

```
depthFirst (root) {  
  if (root is not em  
  for each child o  
    depthfirst( child )  
  visit root  
}
```

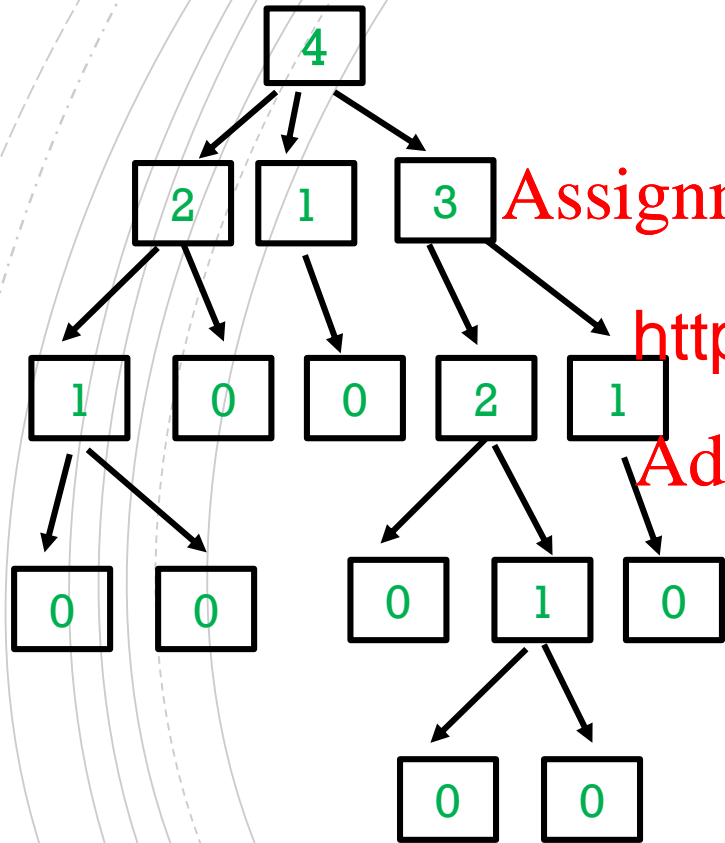

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

EXAMPLE 1 OF USING A POSTORDER TRAVERSAL: height(v)

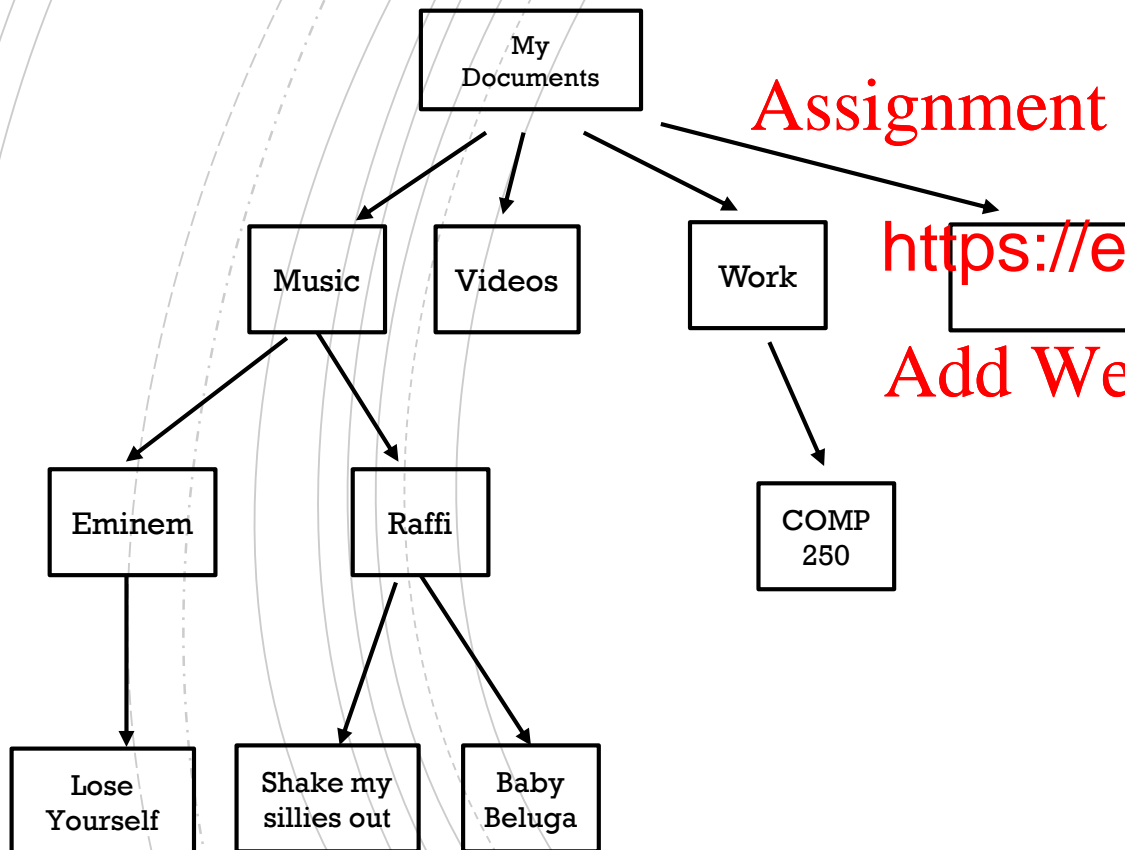

```
height(v) {  
    if (v is a leaf)  
        return 0  
    for each child w of v  
        h = max(h, height(w))  
    return 1 + h  
}
```

visit = return value of height

EXAMPLE 2 OF USING A POSTORDER TRAVERSAL

What is the total number of bytes in all files in a directory?

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

```
numBytes(v) {  
    if (v is a leaf)  
        rn number of bytes at v  
    0  
    ch child w of v  
    sum += numBytes(w)  
    return sum  
}
```

visit = determining the number of bytes for a node, e.g. If we were to store 'sum' at the node.

depthFirst() – PREORDER VS POSTORDER TRAVERSAL

```
depthFirst (root) {  
    if (root is not empty)  
        visit root  
    for each child of root  
        depthfirst( child )  
}  
}
```

```
depthFirst (root) {  
    if (root is not empty) {  
        for each child of root  
            depthfirst( child )  
        sit root  
    }  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu_assist_pro

CALL SEQUENCE OF `depthFirst()`

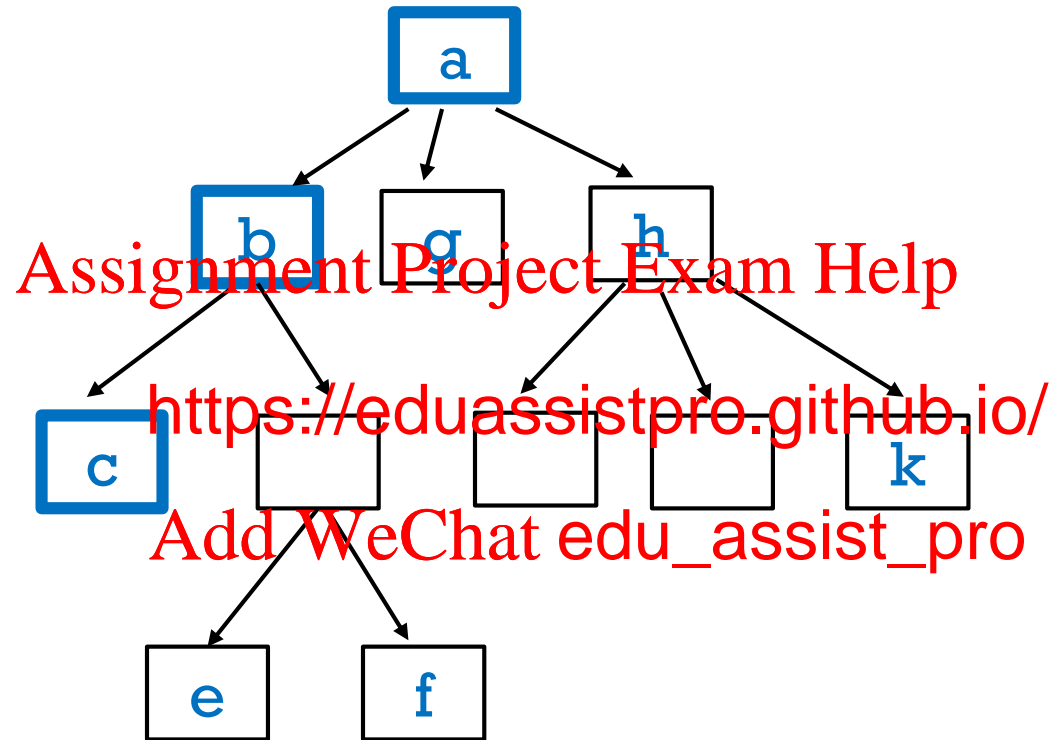

When we call `depthFirst(root)`, the same call sequence occurs for preorder vs postorder implementation

In the example on the right, the letter order corresponds to `depthFirst(root)` call order.

Note that the call stack stores information about the active method calls in a program.

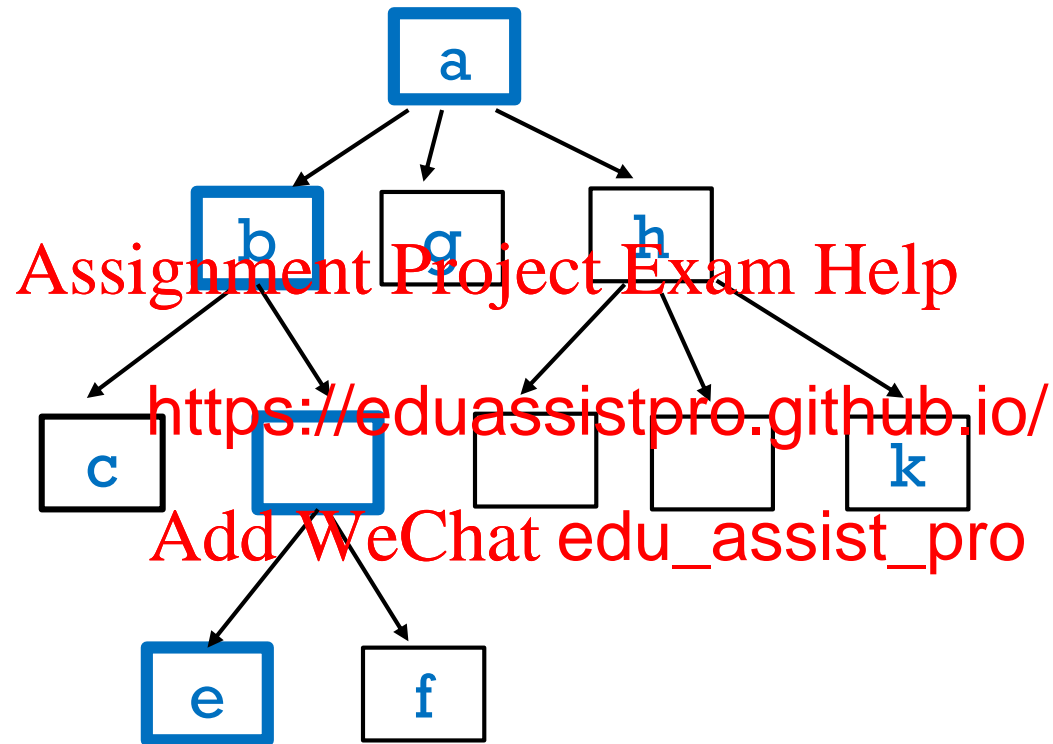

CALL STACK FOR depthFirst(root)

a a a
b b
c

Note that the call stack stores information about the active method calls in a program.

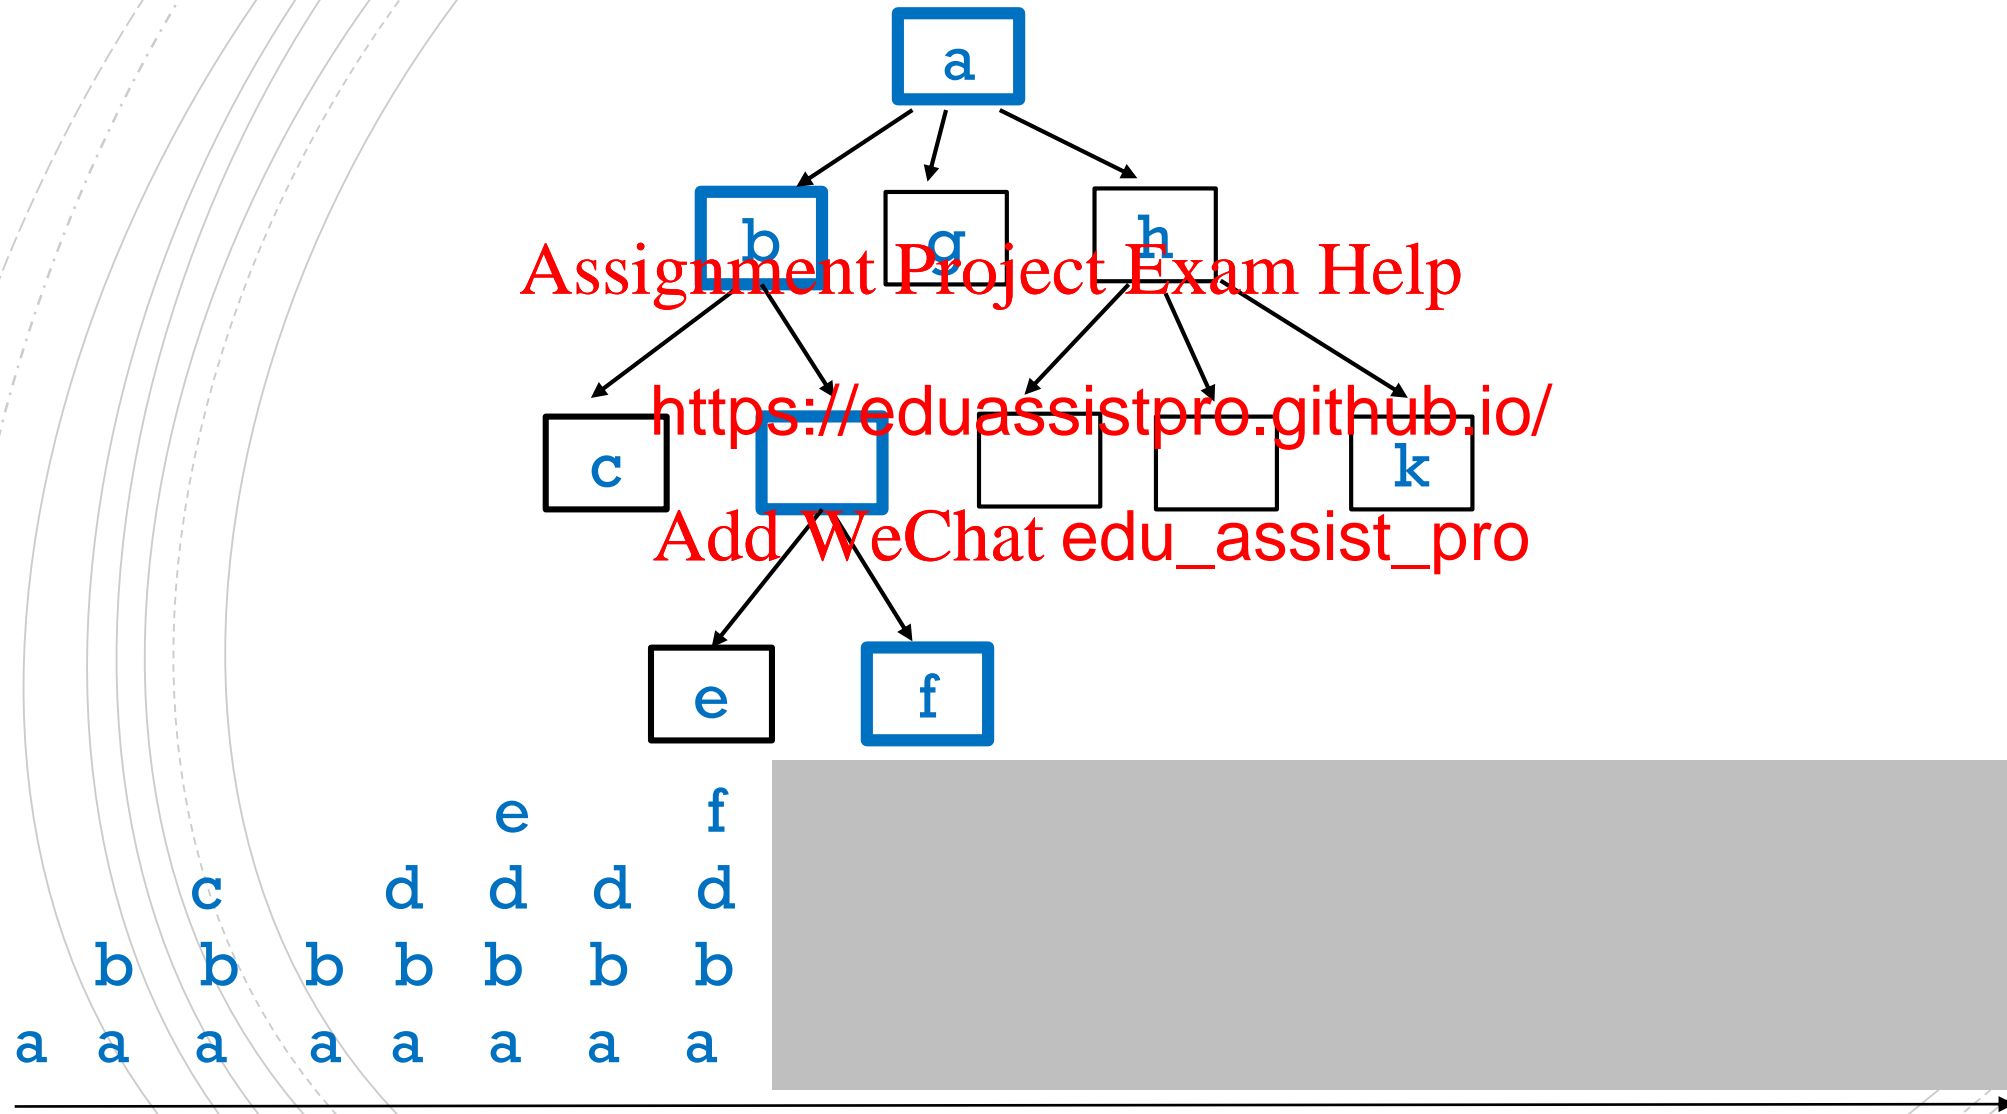

CALL STACK FOR depthFirst(root)

a a b b c c d d e
a a b b c c d d e

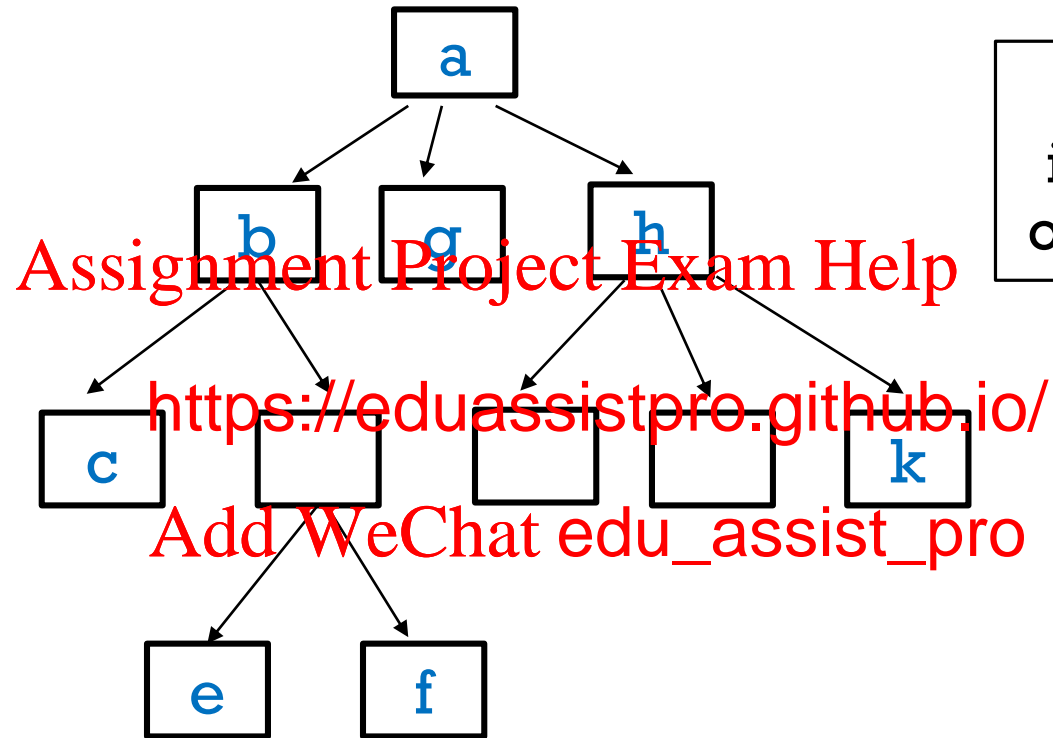

Note that the call stack stores information about the active method calls in a program.

CALL STACK FOR depthFirst(root)

Note that the call stack stores information about the active method calls in a program.

CALL STACK FOR depthFirst(root)

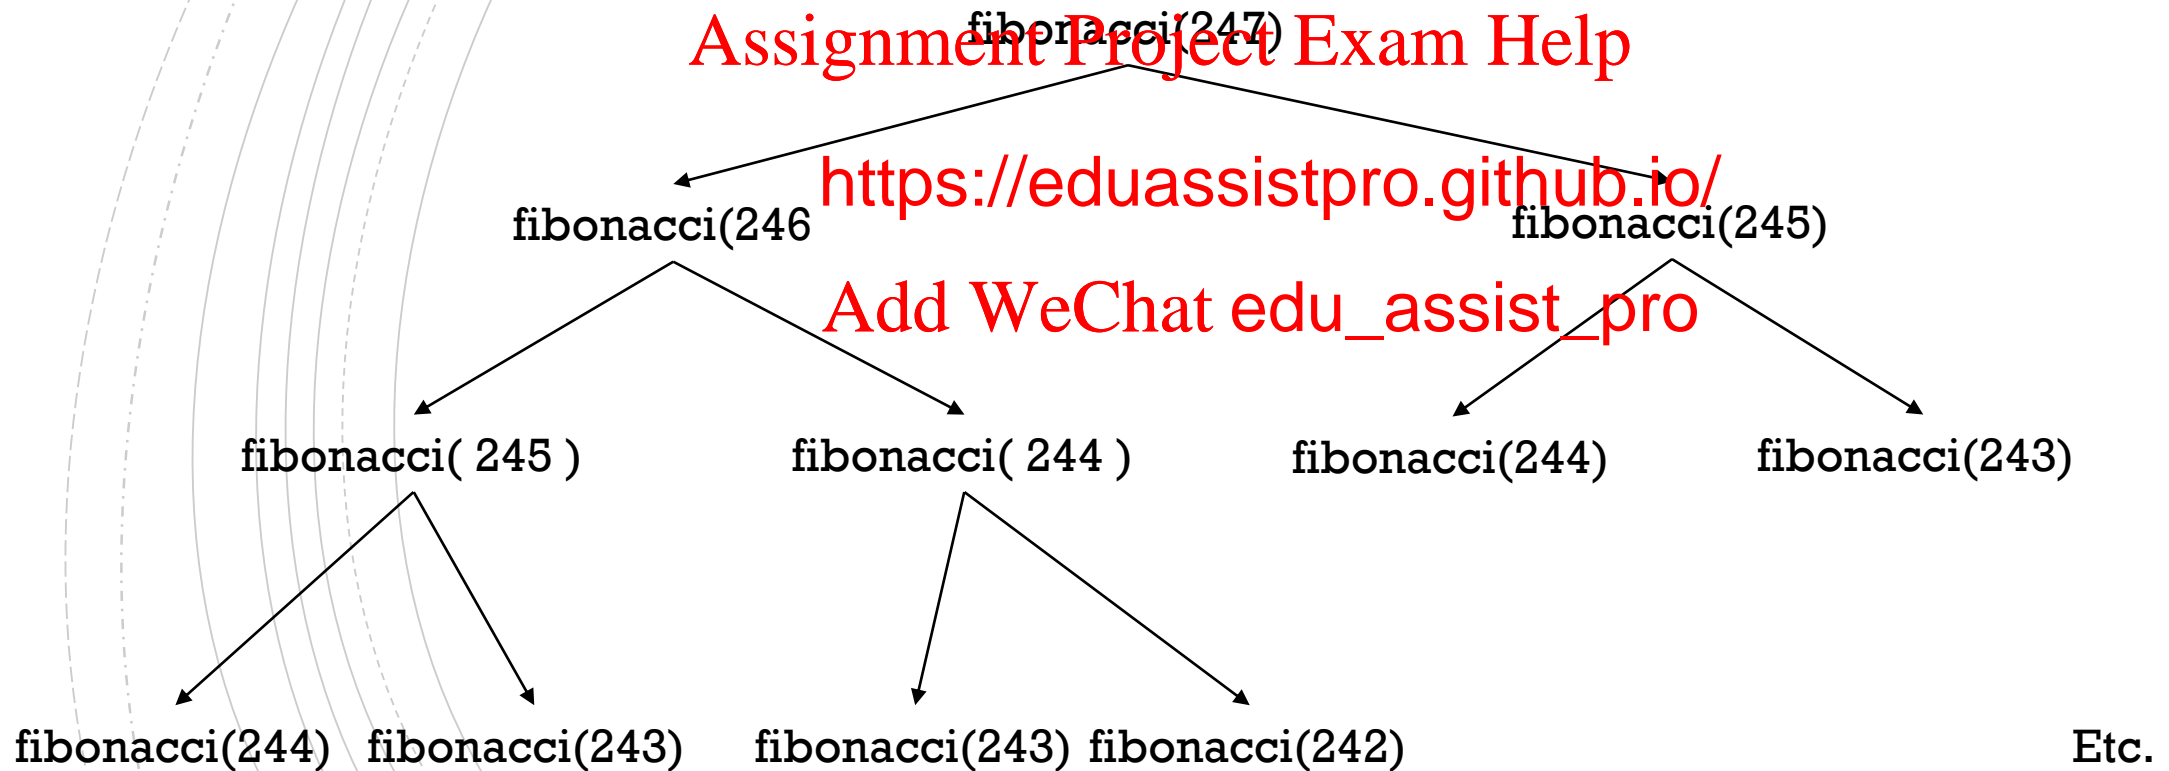

Notation: the letters indicate the call order of `depthFirst(root)`

a a b a c b b b d d e d d f d d g h i h h j h k h a

EXAMPLE

We used a tree to represent the call stack of the recursive Fibonacci method.

TREE TRAVERSAL IMPLEMENTATIONS

Recursive

- depth first (pre- versus post-order)

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Non-Recursive

- using a stack
- using a queue

Add WeChat edu_assist_pro

TREE TRAVERSAL – WITH A STACK

```
treeTraversalUsingStack(root) {  
    initialize empty stack s  
    s.push(root)  
  
    while (s.empty() == false) {  
        node = s.pop()  
        // process node  
        if (node != null) {  
            s.push(node.left)  
            s.push(node.right)  
        }  
    }  
}
