## EXAMPLE

## SAME EXAMPLE – DIFFERENT NOTATION

# WEIGHTED GRAPH

## DEFINITION

A *directed graph* is a set of vertices

$$V = \{v_i : i \in \{1, \dots, n\}\}$$

and set of ordered pairs called edges.

$$E = \{(v_i, v_j) : i, j \in \{1, \dots, n\}\}$$

In an *undirected graph*, the edges are *unordered* pairs.

$$E = \{\{v_i, v_j\} : i, j \in \{1, \dots, n\}\}$$

(e.g. **f**) ?

Out degree: How many web pages does some web page (e.g. **f**) link to ?

## TERMINOLOGY: PATH

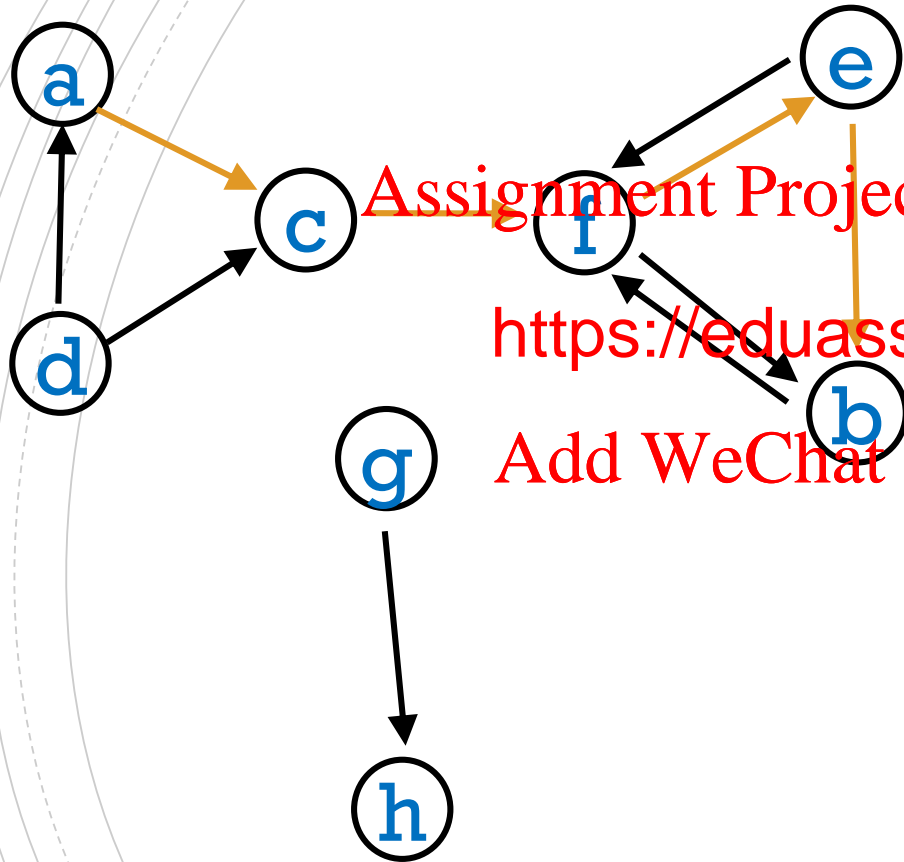

A *path* is a sequence of edges such that the end vertex of one edge is the start vertex of the next edge  
no vertex is repeated  
not maybe first and last.

How to implement a Graph class?

A graph is a generalization of a tree, so ...

## RECALL: HOW TO IMPLEMENT A ROOTED TREE IN JAVA ?

```
class Tree<T>{
    TreeNode<T> root;
    :
    class TreeNode<T>{
        T element;
        ArrayList<TreeNode<T>> children;
        TreeNode<T> parent; // optional
    }
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

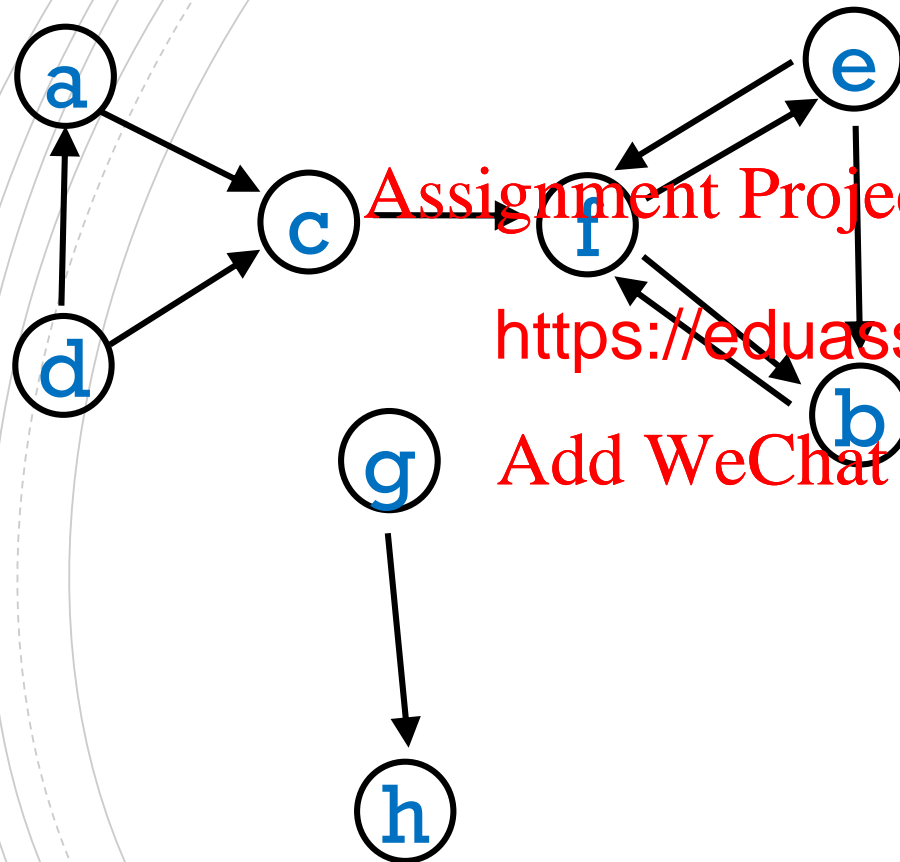

Add WeChat edu\_assist\_pro

// alternatively....

```
class Tree<T>{
    TreeNode<T> root;
    :
    class TreeNode<T>{
        T element;
        TreeNode<T> firstChild;
        TreeNode<T> nextSibling;
    }
}
```

# ADJACENCY LIST

(GENERALIZATION OF CHILDREN FOR GRAPHS)

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

<u>v</u>	<u>v.adjList</u>
a	c
b	f
c	f
d	a, c
e	b, f
f	b, e
g	h
h	

Here each adjacency list is sorted, but that is not always possible (or necessary).

# HOW TO IMPLEMENT A GRAPH CLASS IN JAVA?

A very basic Graph class:

```
class Graph<T> {  
    class Vertex<T> implements GNode {  
        ArrayList<Vertex> adjList;  
        T element;  
    }  
}
```

# HOW TO IMPLEMENT A GRAPH CLASS IN JAVA?

```
class Graph<T> {  
    class Vertex<T> {  
        ArrayList<Edge> adjList;  
        T element;  
        boolean visited;  
    }  
  
    class Edge {  
        Vertex endVertex;  
        double weight;  
        :  
    }  
}
```

Assignment Project Exam Help

<https://eduassistpro.github.io/>

Add WeChat edu\_assist\_pro

Note that, unlike a rooted tree, there is no notion of a root vertex in a graph.

## HOW TO REFERENCE VERTICES?

```
class Graph<T> {  
    ArrayList<Vertex<T>> vertexList;  
    ArrayList<Edge<T>> edgeList;  
    :  
    class Vertex<T> {  
        :  
    }  
    class Edge<T> {  
        :  
    }  
}
```

```

## "DEFINITIONS"

Consider a graph with  $n$  vertices.

Assignment Project Exam Help

We say that the graph is <https://eduassistpro.github.io/> edges is close to  $n^2$ .

Add WeChat edu\_assist\_pro

We say that the graph is *sparse* if the number of edges is close to  $n$ .

(These are not formal definitions.)

## EXERCISE

Would you use an *adjacency list* or *adjacency matrix* for each of the following?

- The graph is sparse e.g. 10,000 vertices and 20,000 edges and we want to use as little space as possible.

Assignment Project Exam Help
